PROJECTS

SuperBlog AI-Powered Content Platform

April 2026

Full-Stack Next.js & Supabase Application 

- Developed a modern blogging platform using **Next.js 15 (App Router)**, **TypeScript**, and **Supabase** featuring secure authentication and role-based access (Author/Viewer/Admin).
- Integrated **Google Gemini 2.5 Flash** to generate structured AI summaries with a custom "Review & Publish" flow, reducing unnecessary API costs by avoiding generation for draft posts.
- Implemented **Cost Optimization** strategies, including a token reduction layer that truncates input to 6,000 characters and persists summaries in the database to prevent repeated API calls.
- Built server-side actions for CRUD operations on posts and comments, utilizing de-normalized schema design (**PostgreSQL**) to enhance read performance by 30% through minimized table joins.
- Resolved complex **CI/CD production bugs** related to strict TypeScript type-checking for null values in database fallbacks and explicit variable typing in list-mapping logic during Vercel deployment.

Tomato Real-Time Food Delivery System

March 2026

Scalable MERN Microservices Application

- Built a scalable food delivery platform using **MongoDB**, **Express.js**, **React**, and **Node.js** with microservices architecture.
- Designed services (**Auth**, **Restaurant**, **Order**, **Payment**) enabling modular scalability and fault isolation.
- Integrated **RabbitMQ** for asynchronous processing of payments and reliable rider notification workflows.
- Implemented **Socket.io** for real-time updates and **Redis** for caching live rider locations to enable low-latency tracking.

Taxi Booking & Management System (Uber-like)

Jan 2026

Scalable Real-Time Full Stack Application

- Engineered a ride-hailing platform using **React**, **Redux**, **Node.js**, and **Express.js** supporting real-time interactions.
- Designed and implemented **Socket.io** for ride requests, live driver assignment, and trip tracking.
- Architected **RESTful microservices** for pricing and lifecycle management with clear service separation.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript (ES6+), TypeScript, SQL, Python

Frontend Technologies: Next.js, React.js, Redux, Tailwind CSS, HTML5, CSS3

Backend Technologies: Node.js, Express.js, Supabase, RESTful APIs, JWT Authentication, RabbitMQ

Databases: PostgreSQL (Supabase), MongoDB, Redis, MySQL

Cloud & DevOps: Vercel, AWS (EC2, S3), Git, GitHub Actions, Postman, Linux

AI Development: Gemini Pro/Flash API Integration, Prompt Engineering, Antigravity AI, Claude Sonnet

EDUCATION

ABES Institute of Technology

2023 – Present

Bachelor of Technology in Computer Science and Technology

CGPA: 6.1

St. Joseph College

2019 – 2021

Higher Secondary Education (ICSE Board)

Class 12: 70%

CERTIFICATIONS

Full Stack Intern Certificate Hivon Automations (ID: 23042026/01)
Springboard

Linux Certification Udemy

DBMS Infosys
